

Hi all. I think the totality of this meeting is going to be a statement on today's openssl release, which is to say that chef-client/chef-server/chefdk are unaffected by the announced vulnerability and so won't be making releases

*martinisoft\_ is now known as martinisoft*

12:02 pm

**martinb3** Sounds good. :)

12:02 pm

**thom** it's possible but unlikely that some of our commercial offering are affected and will make a release, but i'm unaware of any thus far

12:03 pm

**kallistec** ChefDK 0.7 RC is coming soon, as is a Chef Server 12.1.1. The latter will have fixes for some migration issues that happen when migrating from CS 11 and the old Enterprise Chef product

12:05 pm

ChefDK 0.7 bumps chef to 12.4.1 and has a ton of policyfile stuff, plus some improvements for windows when using networked home drives and such

12:06 pm

**thom** thanks, dan

12:06 pm

**kallistec** <https://github.com/chef/chef-dk/blob/master/CHA...>

12:07 pm

**someara** good meeting everyone

12:11 pm

**coderanger** Do we want to do anything with <https://github.com/chef/chef-rfc/pull/139?>

12:12 pm

I think Thom can fiat-accept it directly and no one seemed to have any objections

12:13 pm

**thom** yeah

12:13 pm

i was leaving it a few days but the original seemed generally accepted

12:13 pm
